Surface **HYBRID INTELLIGENCE STUDIO**
Surface Laptop Ultra

THE EXECUTIVE EXPERIENCE / 05 MINUTES

The next advantage. Runs right here.

Put local AI in the hands of the people doing the work.
Show the experience. Measure the result. Build the case.

THIS DEVICE	128 GB	20 cores	Blackwell RTX GPU
	Installed · 64 GB Windows-visible	CPU cores reported by Windows	Actual inference provider shown per run

03 / CUSTOMER-SPECIFIC ECONOMICS

Don't promise ROI. Make the assumptions visible.

Translate a validated workflow improvement into potential capacity. Start with the customer, not a benchmark.

People in scope	Tasks / person / day	Minutes gained / task	Working days / year
100	4	3	220

Effective adoption (%)	Loaded labor value ($/hour)	Incremental device cost ($/person)
60	60	600

Every input is illustrative.
Device cost is not a quoted price.

POTENTIAL ANNUAL CAPACITY	ILLUSTRATIVE CAPACITY VALUE	INCREMENTAL HARDWARE COST
2,640	$158,400	$60,000
hours / year	not cash savings	one-time assumed difference

```
100 people × 4 tasks × 3 min ÷ 60 × 220 days × 60% adoption = 2,640 hours/year
```

Not an ROI forecast. Excludes software, implementation, support, financing and change-management costs. Time gained and adoption must be validated in a pilot. Cloud subscriptions are held unchanged.

THE PILOT CONVERSATION

From impressive demo to a scoped customer pilot.

Discover one workflow.
Identify the people, data boundary and current baseline.

Prove it on the target SKU.
Measure task time, quality, compatibility and user experience.

Scale what earns its place.
Align device, software, deployment and support with your solution partner.

Independent seller-enablement prototype · Synthetic scenarios · Not an official Microsoft or NVIDIA product announcement.

Local GPU inference through CUDA. Setup/catalog access may use the network. Non-essential SDK telemetry disabled; a minimal SDK process event may remain. No battery or competitive benchmark claim.
